Each coin = +1 point

Lives:

Start with 3 lives

Lose 1 life when hitting an enemy car

Win Condition:

Reach target score of 20 coins

Lose Condition:

Lose all lives

Gameplay Notes:

The game gets faster over time

Enemy cars spawn more frequently and get faster as game continues

Highway Havoc is a game where the player controls a car driving down a busy and dangerous highway while trying to avoid traffic and collect coins. The player moves left and right between lanes to dodge incoming cars and grab coins for points. Enemy cars that you must avoid spawn at the top of the screen and move downwards, and coins will randomly appear in lanes as well. Every coin collected increases the players score. Crashing into a car causes the player to lose a life. The game ends when the player runs out of lives or reaches a target score to win. The player is a vehicle image, and enemy cars are the same vehicle image but colored differently. Coins are gold circles and bright so they're easy to see.

The PlayerCar is controlled by the user using the left and right arrow keys. It can switch between three lanes on the highway. When the PlayerCar touches a coin, the coin disappears and the score increases. If it touches an enemy car, the player loses a life. The player starts with three lives.

The EnemyCar is the traffic on the highway. These cars spawn randomly at the top of the screen in a random lane, and move downwards. If they reach the bottom of the screen, they get removed. If they hit the player, they remove one of the players lives.

The Coin is a collectible object that appears randomly in a random lane, like enemy cars. When the player touches a coin, it disappears and the score increases. Touching a coin only increases score, does not take away lives or anything.

The HighwayWorld manages the entire game, it handles spawning enemy cars and coins and tracks the players score and lives. It also decides when the game ends. As time goes on, the game becomes harder by increasing the speed of the cars, and also the frequency at which they spawn. When the player loses all lives, the game shows a game over screen. If the player reaches the target score, they win and it shows a win screen.
